“Phase separation by the nucleocapsid protein of SARS-CoV-2: good to the last drop!”

David Morgan
Professor
Physiology
University of California – San Francisco

Tuesday January 19th, 2021
Zoom Meeting @ 11AM
Hosted By: Ted Weinert (MCB)

I'll be discussing recent studies of the nucleocapsid (N) protein of SARS-CoV-2. We found that the N protein, together with viral RNA, forms gel-like biomolecular condensates and particles that are consistent with its genome packaging role. Phosphorylation transforms condensates into liquid-like droplets, which may provide a cytoplasmic compartment to support the protein’s function in viral genome transcription.
